

Knowledge Base Coverage Feedback Report

Submitted by: Evelyn Caro **Cohort:** 2026-RTT-41 | AWS re/Start Program **Graduation Date:** September 9, 2026 **Date of Report:** September 10, 2026 **Platform:** Per Scholas AI Assistant (Azari) — Praxis LXP

1. Purpose

This report documents specific gaps identified in the AI assistant knowledge base during active use by a program graduate. It is submitted in good faith to support continuous improvement of the platform for current and future Per Scholas learners.

2. Query That Returned No Results

During a session on **September 10, 2026**, the following query was submitted to the AI assistant and returned no relevant documentation:

"Job Readiness Assessment (JRA) — Week 6 and Week 10 requirements, and whether early graduation affects JRA requirements or timeline for cohort 2026-RTT-41."

The assistant confirmed that **no JRA documentation exists in the knowledge base** and directed the user to contact their Program Manager or check Canvas directly. While the redirect was appropriate, the absence of this foundational program documentation represents a meaningful gap for learners who rely on the AI assistant for program guidance.

3. Findings

Finding 1 — No JRA Documentation Present

The knowledge base contains **no documentation** related to the Job Readiness Assessment process, including:

- JRA rubrics for Week 6 and Week 10
- Criteria for early graduates
- Assessment timelines or unlock conditions

Finding 2 — No Survey Availability Documentation

A separate query regarding the **Mid-Course Survey** and **End-of-Course Survey** (submitted in the same session) also returned no results. There is no documentation in the knowledge base covering:

- Survey availability windows
- Unlock conditions or triggers
- Post-graduation access policies

Finding 3 — Knowledge Base Contains Learner-Submitted Content

The knowledge base was found to contain what appears to be **learner-submitted personal content** — specifically, a professional profile banner image attributed to an individual learner. This type of content is not program documentation and should not be part of the institutional knowledge base surfaced to all users.

Finding 4 — Knowledge Base Contains Blank or Unextractable Documents

At least one document in the knowledge base (a lab PDF titled *"1.5.4 Lab - My Local Network"*) returned **no extractable text content** during retrieval. The document appears to be a blank or improperly rendered page, providing no instructional value to learners querying the assistant.

4. Recommendations

The following additions and corrections are recommended to improve knowledge base coverage and quality for AWS re/Start learners:

Priority	Recommendation
□ High	Add JRA rubrics for Week 6 and Week 10, including criteria for early graduates

□ High	Add AWS re/Start program syllabus (technical curriculum)
□ High	Add Professional Development syllabus (required alongside technical curriculum for course completion)
□ High	Add survey availability documentation (Mid-Course and End-of-Course unlock windows and access policies)
□ Medium	Add a graduation checklist covering all requirements, including JRA completion, survey submission, and any post-graduation steps
□ Medium	Remove or replace blank/unextractable documents that return no content when queried
□ Low	Audit and remove learner-submitted personal content (e.g., profile banners) that does not belong in the institutional knowledge base

5. Impact

These gaps directly affect a learner's ability to self-serve on critical program milestones. When the AI assistant cannot answer questions about JRA requirements, survey access, or graduation checklists, learners are redirected to manually contact program staff — increasing the support burden on instructors and program managers, and reducing the value of the AI platform investment.

Addressing these gaps would meaningfully improve the learner experience for all current and future AWS re/Start cohorts.
